

Bachelor of Information Technology (Domestic students)

Program code	Entry requirements	Prerequisites
1538	15	English (4SA)
Available at Nathan Campus	Overall position (OP) 2019 66	Assumed knowledge Maths A or B (4SA)
Duration 3 years full-time 6 years part-time	Rank 2019 OR VET qualification Certificate III (Additional requirements)	
Credit points 240	Commencing in Trimester 1, Trimester 2 and Trimester 3	
Indicative fee \$9,527.00* per year (more) * 2020 indicative annual CSP fee Calculate your fees		VET Guarantee If you receive a VET and meet subject prerequisites, you are guaranteed a place in this program.

Why choose this program?

This program will provide students with a core of IT technical knowledge and also allow a major in Information Systems, Networks and Security or Software Development to be undertaken. The program is flexible enough for students to gain expertise in other areas, including those outside the IT domain. The IT technical component of the program commences in Year 1 and addresses IT skills such as understanding the basics of computing technology, how to design and build web sites, computer programming, data management, software development and human computer interaction. This is followed by more advanced IT skills in Year 2 including software technologies, information security and IT services management. The courses for all majors are in Year 2 and Year 3 of the program. The Information Systems major, covers topics such as business analysis, IS architecture, business/IT alignment and project management. The Networks and Security major studies the design, control and management of various types of networks and applied network security. The Software Development major provides a combination of courses that give students a background in technical on-line programming, software quality management, the process of software development and an appreciation of interacting within the business environment. Students undertaking the Information Systems major will be prepared for International Institute of Business Analysis (IIBA) certification while those taking the Networks and Security major will be ready for network certification.

The Bachelor of Information Technology addresses the knowledge/skills needed by IT graduates and also allows specialisations in Information Systems, Networks and Security or Software Development. This degree is suitable for students seeking a more generalist IT degree which will allow them to pursue a vocational career in IT with less complex abstract problem solving and programming requirements.

My attendance during the program

Attendance information

The Bachelor of Information Technology is offered full-time and part-time. Courses are offered in blended learning mode which range from fully online to, where access to specialised hardware is required, on-campus only.

Currently the School of ICT offers a number of Bachelor of Information Technology courses in intensive mode over trimester 3. While these are primarily to support the part-time Bachelor of Applied Information Technology at Logan, Bachelor of Information Technology students are also able to take these courses to accelerate their progression.

Note: This is a new program and, as such, it will be introduced through a progressive roll-out with Year 1 courses offered in 2016, Year 2 courses offered in 2017 and Year 3 courses offered in 2018. Students entering the program with credit for prior studies should note that the earliest time the University anticipates it will be offering all core program requirements will be 2018.

Student Income Support

To be classed as a full-time student, you are required to enrol in a minimum number of credit points each standard study period. The minimum credit points for full-time enrolment in this program is 30 credit points.

Trimester 1 and Trimester 2 are deemed standard study periods. As Trimester 3 is a non-standard study period, continuing students moving from one year to the next will not be required to study during this trimester to be eligible for student income support.

Domestic students who commence in Trimester 3 may be eligible for student income support from the onset of study provided they are enrolled full-time in this study period.

Please refer to the [Australian Government website](#) for more details.

Work-integrated learning

Students must complete a 20 credit point Work Integrated Learning course in their third year. This Work Integrated Learning course can be taken as either an Industry Affiliates Program (IAP) or team-based Industry Project modes. IAP has been designed to integrate students into the workplace through the completion of an industry based project. It is designed to benefit both the student as well as the industry partner. IAP requires both an industry professional supervisor and an academic supervisor. The maximum workplace attendance requirement will be 2.5 days a week (20 hours) over 12 weeks (i.e. 240 hours). The Industry Project option for the Work Integrated Learning course requires students to analyse, design and propose an innovative solution to a computer-based information system or how to leverage technology for an existing problem within an organisation. The School of ICT has ample projects for students to undertake.

The inclusion of work-integrated learning in this program demonstrates Griffith's commitment to preparing its graduates for success in their working life.

My career opportunities

My career opportunities

The core courses of the Bachelor of Information Technology prepare students for careers in: computer security, IT support roles, software acquisition, software integration, software enhancement/maintenance and database support. Those students who complete the Information Systems major will have additional opportunities in business analysis, IT management, IS architecture design and project management. Students who complete the Networks & Security major will have additional opportunities in network support, network design and network security support. The Software Development major prepares graduates for entry-level positions in software development careers.

Program accreditation

Program accreditation

The Bachelor of Information Technology is conditionally accredited with the [Australian Computer Society](#)

Professional recognition

Professional recognition

Graduates are eligible to apply to join the [Australian Computer Society](#) as full members.

Griffith University has accreditation from the International Institute of Business Analysis (IIBA) and graduating Bachelor of Information Technology students with the Information Systems major will have commenced their preparation for industry certification from the IIBA.

Those Bachelor of Information Technology students graduating with the Networks and Security major will be ready to undertake industry network certification.

What are the fees?

Commonwealth supported students

- The fee is indicative of an annual full-time load (80 credit points) in a program categorized to one of the Australian Government's three broad discipline areas (student contribution bands). A student's actual annual fee may vary in accordance with his or her choice of majors and electives. The Australian Government sets [student contribution amounts](#) on an annual basis.
- [Find out more...](#)

Fee-paying undergraduate (domestic) students

These fees are only applicable to domestic students who are not Commonwealth supported including:

- Full-fee paying domestic students who commenced their program prior to 2009.
- International students who have been approved to pay domestic tuition fees after obtaining Australian or New Zealand citizenship or permanent residency or a permanent humanitarian visa and who have not obtained a Commonwealth supported place.

Tuition fees

- A fee-paying undergraduate student pays tuition fees.
- Students are liable for tuition fees for the courses they are enrolled in as at the census date.
- The tuition fee is charged according to the approved program fee for the trimester in which the student is enrolled.
